Methylene Blue
Analysis

Customer Name: Micor Inc.

Address: 800 Clarendon Ave. Bensalem, Pa. 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than ($<$) 1.4 μ g (micrograms) indicate archival quality, and greater than ($>$) 1.4 μ g indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

TEST IDENT.	ACTUAL CONCENTRATION	MEETS ANSI STANDARD ($<$) 1.4 μ g	DOES NOT MEET ANSI STANDARD ($>$) 1.4 μ g
MARRINC Bureau 8/29/91	.19	✓	

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI Standard IT9.1-AS: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 μ g for residual thiosulfate.

BRONX

A small, tilted rectangular label with the word "FREE" repeated in a grid pattern. The text is arranged in three rows: the top row has five "FREE"s, the middle row has three "FREE"s, and the bottom row has two "FREE"s. The label is attached to a dark, textured surface.

GROOM

BRIDE

A close-up of a diamond-shaped calibration target. It features a grid of numbers and letters. The numbers 2.0, 2.2, 2.5, and 2.8 are visible, along with the letters 'E' and 'F'. The target is used for ensuring the accuracy of the printed output.

BRONX

A close-up photograph of a spiral-bound notebook. The notebook is open to a page with a grid of numbers. The numbers are arranged in a 4x6 grid, starting from 1 in the top-left corner and ending at 24 in the bottom-right corner. The numbers are printed in a bold, sans-serif font. The spiral binding is visible on the left side of the notebook.

Methylene Blue
Analysis

Customer Name: Micor Inc.

Address: 800 Chestnut Ave. Bensalem, Pa. 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than ($<$) 1.4 μ g (micrograms) indicate archival quality, and greater than ($>$) 1.4 μ g indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

TEST IDENT.	ACTUAL CONCENTRATION	MEETS ANSI STANDARD ($<$) 1.4 μ g	DOES NOT MEET ANSI STANDARD ($>$) 1.4 μ g
MARKING Bureau 8/29/91	.19	☒	☐
		☐	☐
		☐	☐
		☐	☐
		☐	☐

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI Standard IT0.1-AS: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 μ g for residual thiosulfate.
